1.0 OVERVIEW

The Battlegroup Wargame System (BGWS) is a flexible, low complexity wargaming system. It is designed as an educational and training tool for planning and executing operations from Platoon to Battlegroup level.

BGWS requires a minimum of two players, representing the Blue and Red sides, but it can also be played between teams. Play is resolved on a real-world map, following an Action-Reaction-Counteraction sequence. The focus of BGWS is on command, intelligence, manoeuvre and combat. Fog of war and friction are essential elements.

BGWS comprises a set of Core Rules that can be applied to any scenario, and Optional Rules used to emphasise specific elements of modern land combat operations. An accompanying set of Scenario booklets sets out four pre-made Scenarios. The Optional Rules also provide a guide for how users can generate their own Scenarios to suit their educational and training requirements.

BGWS provides a range of tools to support playing the game, including Player Aids, a Quick Start Guide (OSG), and digital support tools. Using these, play can begin with minimal time required to teach the game. BGWS also provides tools to support wider learning goals; specifically, each Scenario comes with key learning objectives.

BGWS AND MILITARY JUDGEMENT

The application of military judgement is critical to the playing of BGWS. Any rule can be flexed or even ignored by an umpire or the agreement of players from both sides if the military judgement is that this would be appropriate. Similarly, military judgement should be applied to resolve edge cases or situations the rules do not cover. If playing without an umpire and the players are unable to reach an agreement about a game mechanic – roll a die to resolve and move on.

DECISION MAKING

BGWS is designed to force continual decision making onto the players. Every decision comes with potential consequences. It is recommended that these decisions be made under the high pressure that reflects real combat operations. Therefore, try to avoid long deliberations about modifiers and mitigations in the moment. Consider a 15 second rule: 15 seconds to make a decision, or you Pass to your opponent.

Stop! Before reading any further in this Rulebook you should read the QSG to understand the basic principles behind the rules set out here.

1.1 WHAT'S IN THE BOX

2x D6 DICE

One red, one blue.

1x CORE RULEBOOK (this book)

This Core Rulebook contains all the rules required to play the game.

To support ease of reference, the Core Rules are structured to follow the game's sequence of play, with key game concepts set out up front. At the back of the book is a Glossary that also serves as an index to support quick reference of the rules. Where relevant, game terms in this Rulebook that begin with a capital letter are further explained in the Glossary.

1x OPTIONAL RULES & DESIGN NOTES

This booklet contains Optional Rules to support different real-world factors and considerations players may wish to introduce, and a set of Designer Notes explaining the rationale behind the various mechanisms used in the game.

2x QUICK START GUIDE

The OSG provides a short summary of the rules. It should be read before reading this Rulebook and shared with participants who are not familiar with the rules as pre-reading prior to a game.

4x SCENARIOS

There are four Scenarios that come with the game. The first is a training Scenario to help learn the game. All the Scenarios contain Special Scenario Instructions (SSIs), with the background to and special instructions for the Scenario, and Force Management Charts (FMCs) for each side, which also double as the Order of Battle (ORBAT). For Scenario 2, there are also pre-prepared CONOPS, Sync Matrices, FMCs and A4 Planning Maps.

2x PLAYER AIDS

There are two sets of Player Aids, printed on four double-sided sheets. These summarise the key game rules and tables and provide a section reference to the full explanation in this book. Players should play the game using these aids, and only refer to this Rulebook for points not covered by the aids.

2x CONOPS & SYNC MATRIX

Each side (Red and Blue) has blank CONOPS and Sync Matrix cards. These should be photocopied for use in the game.

1x BGWS ORBAT AND CAPABILITIES GUIDE

A summary of the ORBATs and unit Capabilities that can be added to the game for creating Scenarios, rather than using the four pre-generated Scenarios.

2x GAME MAPS

BGWS uses real-world maps, each covering an area of 10x10km, represented by 1,000x1,000 metre grid squares. The maps have a variety of topographical and urban features. The SSIs explain any special rules that apply to the map.

There are two maps used in the four Scenarios. Each map comprises two separate sheets that are placed together to form a single larger map. These sheets are double-sided, and labelled A1, A2, B1, and B2. The SSI will provide instructions on which sheets to put together to create the required map.

2x PLANNING MAP CARDS

There are two double-sided Planning Map cards, one for each side. Each side of the card corresponds to one of the game maps. The Planning Maps are A4 sized and should be photocopied for use. They are used for planning Orders and noting down NAIs, TAIs, control measures and other map-specific information that a side does not want the opposing side to know.

461x COUNTERS & MARKERS

BGWS uses a variety of Force Element (FE) counters and Support markers (see 2.1.2). They are used to track FEs on the board and certain game effects. Many Support markers are only used when playing with the Optional Rules. The relevant marker to use is provided with the corresponding rule in the Optional Rules booklet.

1.2 WAYS OF PLAYING THE GAME

BGWS is designed so that it can be played straight out of the box, with or without an umpire.

NO UMPIRE

A game played without an umpire requires that at least one player take on the responsibility for understanding the rules and Scenario requirements (though it will work better the more people that fully understand the rules before the game begins).

When and how to apply military judgement requires collective agreement.

PLAYER REQUIREMENT:

- Collectively choose the Scenario and any optional rules, and agree learning goals
- At least one player takes on responsibility for understanding and applying the rules
- All other players read the QSG beforehand
- Engage with the learning goals

UMPIRED

An umpired game will be overseen by a staff resource or external facilitator. Depending on the training need, the umpire will select the Scenario, provide an overview of any learning goals and specific rules, and run the game.

UMPIRE REQUIREMENT:

- Choose the Scenario and any Optional Rules
- Understand and be prepared to explain and apply any relevant rules
- Determine learning goals and how to facilitate them
- Ensure the QSG is shared with participants beforehand
- Facilitate the game, support the application of military judgement; provide final arbitration if required

PLAYER REQUIREMENT:

- Read the QSG beforehand
- Engage with the learning goals

PLAYING IN TEAMS

Depending on the learning goal, if playing with multiple players per side it might be appropriate to assign roles to each player. For example, assigning control of a Company to each player in the team under a single designated commander. The commander decides the order of Activations during play, but then should step back and allow Mission Command

by whoever commands the relevant FE/Group on the map.

BGWS AS A LEARNING TOOL

While playing BGWS should be an enjoyable and engaging experience, the goal is to support professional learning. Correct application of the rules or playing the game to completion is less important than taking time during and after the game to discuss what is driving Action decisions and results in the game. Each SSI sets

out key learning objectives that the Scenario can help to support.

PROVENANCE

BGWS serves as a tool for the professional education of British Army officers. Its primary references are the UK *Staff Officers' Handbook 2014* (SOHB), *MOD Wargaming Handbook 2017*, *Battlegroup Tactical Aide Memoire* (AC 72187) and *Field Army Threat Handbook* (AC 72258) with map marking symbols taken from NATO APP6.

2.0 HOW TO PLAY THE GAME

2.1 KEY CONCEPTS

2.1.1 DICE AND MODIFIERS

BGWS uses six-sided dice, known as D6, to resolve tests or aspects of the game where there is some uncertainty in relation to the outcome. Players will be required to either roll 1D6 or 2D6, if the latter, the two individual results on the D6s are added together.

At certain times the rules will require that the outcome of the roll is modified to take account of positive or negative factors that could influence that outcome (e.g. a negative modifier will apply if a side is attempting to fire at an enemy taking cover in Urban terrain). This is called a Dice Roll Modifier (DRM).

Example: A side is required to roll 2D6 and rolls a 1 and 5. The unmodified total is 6. It then needs to apply a +2 DRM. This means the final modified total is 8.

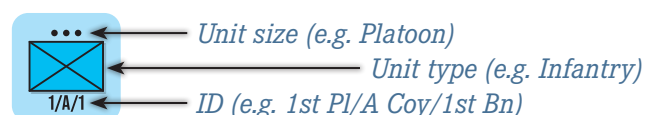

2.1.2 COUNTERS AND MARKERS

BGWS uses a range of FE counters and Support markers. FE counters represent Force Elements in game. Support markers act as mnemonics or represent temporary features or factors on the map.

Not all FE counters or Support markers feature in every Scenario. The SSIs will explain which are used. Some Support markers may also be added when using Optional Rules, in which case the Optional Rule will explain when and how.

2.1.3 FORCE ELEMENTS

FEs represent individual combat units, HQs, support units and assets.

Each FE has a specific counter and an entry (row) on the FMC. The counter tracks the position of the FE* on the map, while the FMC tracks various factors including its Troop Quality, Combat Strength, Capabilities and Ammo levels (see below).

The FE counter provides basic unit identification information, using NATO symbology.

Each FE counter has a "?" on its reverse side. When the "?" side is showing the FE is considered Concealed (see 2.1.15).

*Exceptions: Dummy FEs do not have an entry on the FMC (see 2.1.16).

2.1.4 ACTIONS AND ACTIVATIONS

Each Turn, each FE in the game takes one of four Actions: Move, Fire, Assault or Hold.

To take an Action, an FE must be Activated. On a Turn, each side takes turns Activating FEs. If an FE is part of a Group, all FEs in the Group are Activated, before play switches back to the other side.

2.1.5 TASK ORGANISING & GROUPS

Battlegroups operate smaller ad-hoc task groups to achieve specific objectives. This is covered in BGWS by the process of a side allocating individual friendly FEs – Task Organising them – into Groups. Certain Actions can happen simultaneously among FEs in a Group, for example multiple FEs in the same Group Firing or Assaulting together to increase the potential for inflicting Hits on

the enemy. Consequently, the rules will sometimes refer to “FE/Group” or to a Task Group where a rule is applicable both to an individual FE and a Group of FEs.

2.1.6 TROOP QUALITY

Each FE has a Troop Quality (TQ). This represents training, cohesion and will to fight. TQ is never less than 1 (lowest) or higher than 8 (highest). It is used when testing for Morale, Direct Fire, and during Assaults. It can decrease due to the FE taking Hits in combat.

2.1.7 COMBAT STRENGTH & ELIMINATION

Each FE has a Combat Strength (CS). This represents both its inherent resilience and its capability in combat. CS is used for determining the potential amount of damage an FE can inflict on an enemy. It can be modified by the FE’s Capabilities (e.g. weapons type and Range) and can be combined with other FEs when Firing and Assaulting to increase the damage potential.

CS also determines how many Hits the FE can take before it is Eliminated. As an FE receives more Hits, its CS reduces, and so does its ability to inflict Hits on the enemy. If an FE reaches zero CS, it is Eliminated. An Eliminated Coy HQ can be reconstituted a Turn later in the same Group. All FEs in the Group receive a REORG marker for that Turn. The C2 of the new HQ is reduced by 1.

Design note: “Eliminated” means to be rendered combat ineffective rather than literally wiped out.

2.1.8 CAPABILITIES

Capabilities are specific to each FE and listed on its entry on the FMC. Capabilities primarily refer to the weapons the FE is equipped with and their effect, but may also capture other specific capabilities the FE may have.

Weapons will either be Anti-personnel (Apers) or Anti-tank (Atk). Each weapon type listed has a Max Range, which is the maximum distance away an enemy FE can be targeted by it. A Weapon cannot Fire more than 3km (the limit of LoS in BGWS). Where a Weapon has a Range of more than 3km, the purpose is to extend its Short Range effectiveness. Apers can only be used to target infantry (Foot) and soft-skinned vehicles. Atk can only be used against vehicles.

Weapon types may increase or decrease the FE’s CS when it Direct Fires, depending on the Range to the target.

Short range = <51% of max range

Long range = 51-100% of max range

2.1.9 AMMO

Firing and Assaults both require the use of Ammo. Most FEs begin the game with a certain amount of Ammo, as shown by the unshaded boxes on their entry on the FMC. FEs without Ammo tracking boxes (e.g. FSTs or HQs) can still Fire/Assault; their level of Ammo usage is just not relevant in game terms.

When an FE Fires, or following an Assault, the FE’s Ammo is depleted by striking through an available box on the FMC entry (or two boxes for an Assault). Certain FE have specific Apers and Atk boxes and score off a box dependent upon the type of Fire they use. For off-map A3, the boxes represent available Fire Missions (Artillery) or Availability (Air and Aviation) and are similarly scored off when used.

When there are no unshaded boxes available, the FE can only DirF with a CS of 1, applying an additional -1 DRM, and defends in an Assault with a CS of 1. Ammo can be replenished used a REPLENDEM (see 11.1).

2.1.10 MORALE

Each FE has a Morale Status, representing its current level of Morale.

There are five levels of Morale Status:

Good, Suppressed 1, Suppressed 2, Disrupted, Broken.

An FE’s Morale Status will deteriorate as it takes more Hits. Having anything other than Good Morale can impact on an FE’s ability to carry out Orders and operate effectively (see [MORALE EFFECTS TABLE](#) on Player Aid 2).

An FE’s Morale decreases if it receives a Hit or ‘S’ (Suppression) result because of enemy Fire/Assault, or if it Retreats following an Assault. Each subsequent Hit or ‘S’ result decreases its Morale by one level (note: if an FE receives multiple Hits from the same Fire, it only decreases by one level of Morale).

The Status is tracked by placing the relevant Morale marker on or next to the FE’s counter*. Unless otherwise instructed, all FEs begin the game with Good Morale (no marker).

The Morale level cannot drop below Broken; any subsequent results that would further lower Morale are ignored (though Hits still apply).

***Play note:** To increase Fog of War, players can agree to place the Morale marker on the FE’s FMC entry instead to keep that information unknown to the opposition.

2.1.11 COMMAND RATING

Each BG and Company HQ has a Command Rating (C2), reflecting Leadership effectiveness at the Company and BG level. C2 can be between 1 and 3.

It is used:

- As a modifier when checking Morale
- As a modifier when testing for Initiative
- To determine how many FEs/Groups an HQ can Command Activate when the HQ Activates
- As a modifier during Assaults

When a BGHQ is in play, it applies its C2 rating to the Company (Coy) Tac HQs and any BG FEs (e.g. Recce, Mortars operating under BG command).

The Coy Tac HQs apply their CR to the FEs within their Task Groups (e.g. a Recce Troop attached to A Coy comes under the effect of A Coy Tac HQ's C2).

If there is no BGHQ, the Tac HQ C2 applies to all friendly FEs.

2.1.12 ORDERS & CONPLANS

Orders are a critical part of BGWS. They are drafted for individual FEs or Groups on the Sync Matrix in the Preparation Phase of the game, and then apply throughout the game. They represent what the commanders of each side believe will be required of each FE/Group to fulfil the Scenario objectives.

Orders are drafted using Order Verbs as set out on the Orders Table on Player Aid 2. A drafted Order may be specific for a Turn. Or it may last several Turns, or the whole game.

Example: *In Turns 1-3 an FE may have a Move to X Order, in Turn 4 a Secure X Order, and the remainder of the game Turns a Hold X Order.*

The Order typically determines the goal of the FE for the Turn when it is Activated, not the specific Action it should take (see 8.0 Action types).

As an exception to this, an FE may only take a Reactive Fire Action if it is under certain Order Verbs (see 7.1.3) and is engaging into a TAI specifically assigned to that FE and recorded on the A4 Planning Map and the CO-NOPS. Certain Orders may also have a DRM effect on Attempt Sightings.

If the game state is such that the Order is no longer relevant or applicable to the FE, New Orders can be issued or CONPLANS implemented (see 5.6 Confirm Orders).

A CONPLAN (contingency plan) is a type of Order that an FE can follow if its main Order is no longer relevant. They are typically connected to a Decision Point noted down on the Sync Matrix (and Planning Map if relevant), which notes in what situation they should be implemented.

Until that point, the FE can only be given Actions that correspond with its existing Orders (even if they no longer make military sense).

2.1.13 RESERVES

Instead of a specific Order, an FE/Group may be given a Reserve Order, allowing it to be held in reserve and then moved up to support a priority specified in the Sync Matrix. FEs in Reserve can take additional Movement Action in a Turn, after all the other FEs have Activated, and then Fire or Assault.

Only one-third of FE/Groups in a side may be given a Reserve Order.

2.1.14 TERRAIN & LINE OF SIGHT

BGWS uses maps that reflect real-world terrain and line of sight considerations. In general, players should play the map as they see it, positioning for best Line of Sight (LoS), blocking terrain and/or cover, as appropriate.

LoS is a line that can be traced from an FE to a location on the map (typically used when attempting to target or Sight an enemy FE).

The LoS is blocked if it passes through the following features:

- Steep hills
- Light / Thick woods
- Urban
- FE counters (friendly or enemy) that are on the same elevation.

LoS also has a range limit. It cannot be traced to a target more than 3,000m away.

LoS – resolving disagreements

If players are having trouble agreeing if LoS can be drawn, apply the following guidance:

- 1) Determine Terrain height at Sighting/Firing and target locations. Then,
- 2) Examine the intervening Terrain along the LoS.

If there is any intervening point **higher** than either observer/firer or target, **LoS is blocked**.

If the Sighter/Firer and target are at the **same** height, check if there is blocking feature (see above). If there is, **LoS is blocked**.

If the Sighter/Firer and target are at **different heights**, check where the **highest point** is on the terrain **between** the Sighter/Firer and target. **Add 20m** to the Terrain height **for any features**.

If the Sighter/Firer is **higher**, and the **highest point** along the LoS is located **closer** to the **target**, **LoS is blocked**.

If the Sighter/Firer is **lower**, and that **highest point** along the LoS is located **closer** to the Sighter/Firer, **LoS is blocked**.

2.1.15 CONCEALED, SIGHTING & ISTAR

The SSIs may specify that certain FEs begin the game Concealed (i.e. their counters are placed on the map Concealed side up). A Concealed FE is not Sighted. Any non-Concealed FE is Sighted. **A Concealed FE may not be the target of DirF or Assault.**

Concealment is removed (the counter is flipped) if:

1. The FE Fires or Assaults (except for Mortars Firing out of LoS of any enemy FE),
2. The FE is revealed through an Attempt Sighting,
3. The owning side opts to reveal the FE, or
4. As the result of an EW Chit effect.

An FE can Attempt Sighting against a Concealed FE. There are different levels of success of an Attempt Sighting; at its most successful it can reveal the FE, so it is no longer Concealed (see [10.0 Attempt Sighting](#)).

ISTAR assets have specialist capabilities that assist in Sighting and Indirect Fire.

2.1.16 DUMMIES

The SSI may give one or both sides a certain number of Dummy FE counters. They should be used as part of deception activities. They are treated as FEs but do not

have any Orders. They should be assigned to a Task Group and Activate with that Group. They can be given a Move or Hold Action. They Move as if having the same movement rate of the BG or Coy of which they are a part. They cannot conduct a Sighting Attempt.

They are removed from the game if Sighted or targeted by IDF which causes any kind of result.

2.2 SETTING THE GAME UP

Set the game up as follows:

1. Select a Scenario.
2. Place the map in the centre of the table. It is recommended to cover this map with sheets of transparent Perspex if available to flatten out the creases.
3. Place the EW Chit counters in an opaque container or draw bag.
4. Place the Support and FE counters required by the Scenario, Player Aids and dice within easy reach of both sides.
5. Begin the game with the Preparation Phase.

2.3 SEQUENCE OF PLAY

BGWS uses a strict sequence of play that must be followed. It is split into two phases: Preparation and then Execution.

1. PREPARATION PHASE

2. EXECUTION PHASE

- 1) COMMAND SUB-PHASE
- 2) INITIATIVE SUB-PHASE
- 3) ARC SUB-PHASE
- 4) CLEAN-UP SUB-PHASE

The Preparation Phase occurs only once. Then the four sub-phases of the Execution Phase are repeated until the game ends. Each completed Execution Phase represents one game Turn.

The game ends when the end of the final game turn is reached (based on the SSI), or when the umpire or both sides agree it is an appropriate point.

3.0 PREPARATION PHASE

The Preparation Phase is resolved simultaneously at the start of the game by both sides. It can be completed in as little as 45 to 60 minutes, but can take longer depending on how detailed you wish to make the planning process. It covers preparation and planning prior to engagement.

Simplified Operational Staffwork (OSW) templates have been created for the game which players are encouraged to use. These include a CONOPS on a page, Sync Matrix and an A4 size Planning Map. However, players are free to use whatever planning process they wish to and use as much time on planning as they deem

necessary for educational purposes – bearing in mind the purpose of BGWS is to focus on the execution of plans rather than pure planning.

The Preparation Phase comprises the following steps, applicable to both sides:

- 1. Read the SSI of the chosen Scenario.
- 2. Produce a CONOPS.
- 3. Task Org your forces.
- 4. Produce a Sync Matrix.
- 5. Produce a marked up Planning Map.
- 6. Set up FE counters on the playing map* in accordance with SSI setup instructions and the CONOPS and FMCs.

**Or on the FMC for FEs that begin the game Mounted or Stacked, the latter only if Concealed.*

Play note: Prior to setting up FEs on the map, it is recommended that players first set them up on the FMC, placing each counter on its corresponding image on the FMC. This can help players to confirm all the required counters are present, familiarise themselves with the ORBAT, and to make it easier to place Mounted FMCs on the appropriate entry.

3.1 READ THE SSI

Decide who will be on the Red and Blue side. Each side has its own set of SSIs for the chosen Scenario.

The SSIs provides for each side:

- **The Scenario rules** – Game length, map boundaries, weather effects etc.
- **The situational background** – Why the engagement is occurring.
- **Learning objectives** – Points players should discuss and learn from playing the Scenario.
- **Objectives and victory conditions** – What each side needs to achieve, and how they measure success. A side may be able to achieve a Decisive, Substantive or Marginal victory, or no success. It is possible for both sides to achieve some form of success.
- **A Force Management Chart** – see below.

3.1.1 THE FORCE MANAGEMENT CHART

The FMC lists the ORBAT for each side in the Scenario, with the following information about each FE in the ORBAT:

- **Force Element ID** – Who the FE is.
- **Counter image** – To allow for easy unit identification and setting up of counters.

- **Move Type** (Foot, Tracked or Wheel) – For Movement and some combat resolutions.
- **Combat Strength** (CS) – For resolution of Fire and Assault Actions and tracking the FE's resilience.
- **Hits** – Blank boxes to note how many Hits the FE has received, and the consequent adjustment to its CS.
- **Troop Quality** (TQ) – For Morale tests and some combat resolutions.
- **Capabilities** – The Apers and Atk weapons the FE is equipped with, and any other capabilities.
- **Ammunition** – The amount of Ammo the FE has. Where boxes are not included the FE can still Fire, but its impact and level of Ammo usage is not considered relevant in game terms.
- **Range** (Short, Long and Max) – For each Weapon, any CS modifier at short (up to half the Weapon's Max Range) and Long Range, and the Weapon's Maximum Range.
- **Information/Mounted** – Any other relevant game information for the FE. If a Foot FE is Mounted, it is also placed in this box on the FMC entry row of the vehicle FE within which it is Mounted.

BGWS Training Scenario 1: Blue ORBAT

FE ID	Counter Image	Move Type	CS	Hits	TQ	Capabilities	Ammunition	Short Range	Long Range	Max Range	Information Mounted
Coy HQ TAC A/1		Foot	1	7		Provides C2 of 3 to A Coy Task Op	NA				• Provides LoS for A3 • CS only in defence
1 Plt INF 1/A/1		Foot	7	7		Apers - 762mm GPWG Atk - NLAW	NA	-1 CS	-1 CS	2 km	• Uses specific NLAW column on FRT
2 Plt INF 2/A/1		Foot	7	7		Apers - 762mm GPWG Atk - NLAW	NA	-1 CS	-1 CS	2 km	• Uses specific NLAW column on FRT

These charts are set up to capture typical organisational structures – Coy FE are grouped together, BG FE are grouped etc. to make for ease of management. That does not mean that an FE cannot be attached to another Group (e.g. 1 Plt of A Coy may be attached to B Coy).

The way the FMCs are set up is not a limiting factor, but it is where players manage information on the FEs.

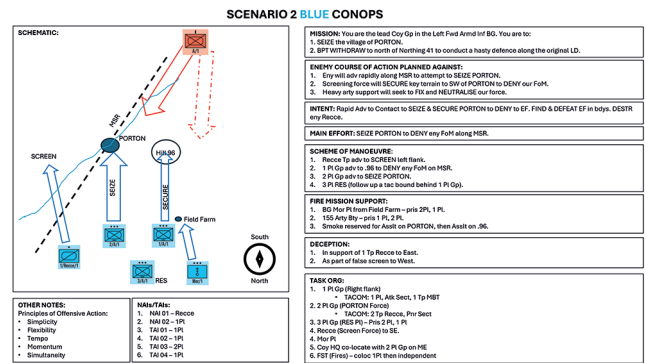

3.2 PRODUCE A CONOPS, PLANNING MAP, & SYNC MATRIX

To reflect the demands of OSW, players are required to plan.

3.2.1 CONOPS

Each side must draft a CONOPS in response to the Scenario, using the blank template provided. This represents that side's overall 'plan on a page' and Task

Organising. The CONOPS should be referred to when playing to provide context for the Orders, and if/when it makes sense in the context of the Mission and Commander's Intent to issue New Orders.

The amount of detail provided can be agreed between the players and will be dependent upon learning objectives. Scenario 2 contains a 'model' answer for Red and Blue as an example of what could be expected.

3.2.2 PLANNING MAP

Players should produce a Planning Map using the A4 map associated with the Scenario map being used. The map should include Observation Areas (NAIs/TAIs) and Control Measures (again Scenario 2 provides a 'model' answer).

OBSERVATION AREAS

Planned ISTAR observation areas, specifically Named Areas of Interest (NAIs) and Target Areas of Interest (TAIs), must be assigned to a single specific Task Group as part of the Preparation Phase and noted on the Planning Map. These are areas in which observation is required with a view to delivering an effect within it.

NAIs provide positive DRMs if enemy FEs are in them for Sighting, and TAIs allow for Reactive Fire into a TAI (see 7.1.3).

Design note: The provision of bonuses here is to reward players for effective and realistic plans. Realistic means the assigned FE can actually cover the assigned area and has positioned themselves to be able to do so.

CONTROL MEASURES

Control Measures that must be noted on the Planning Map include Assembly Areas (Assy Areas), Lines of Departure (LD), Limits of Exploitation (LOE) and Boundary Lines (Bdys). They may also include Objectives and information such as Restricted Fire Lines (RFLs) and No Fire Lines (NFL).

Bdys – Bdys are critical to prevent fratricide. In a Scenario where the largest unit size is Company-level, Control Measures must include inter-Pl Bdys. For a BG sized force, they must include inter-Company Bdys. FEs cannot conduct cross-Bdy Fire or Movement.

Play note: Players may agree that it is possible for an FE/Group to conduct cross-Bdy Fire or Movement, but with a penalty, such as generating 1 Tx cost to the infringing side to deconflict the incident.

DECISION POINTS

CONPLANS in a side's Sync Matrix (see 3.4.3) generally require 'triggers' – Decision Points (DPs). BGWS does not require Decision Support Overlay Matrices, but players should have determined what DPs will cause them to implement a CONPLAN. These they can annotate on the Planning Maps and CONOPS.

3.2.3 SYNC MATRIX

Each side must draft a Sync Matrix which sets out the Orders and CONPLANS (see 2.1.12) that are given to each FE/Group to enable the side to complete its objectives. The Sync Matrix is also separately used to track the number of Tx made by that side, and any friendly FE Eliminated on that Turn.

To draft a Sync Matrix, note down on the first column on the Sync Matrix card each Task Group (which may be as small as an individual FE) in the side's force, based on the ORBAT and Task Org. Groups can be formed by Task Organising individual FEs prior to drafting the Orders (see 2.1.5) and setting this out on the CONOPS.

Orders should be drafted at the level of Task Organised Groups, and only at individual FE level when the FE is not Task Organised, such as a Mortar Platoon.

A3 assets are considered as an individual FE and must be included on the Sync Matrix. Dummy FEs are not included on the Sync Matrix.

Orders and CONPLANS are then drafted by drawing an arrow on the relevant row of the Sync Matrix (corresponding to the FE/Group being given the Order) for the number of Turns the side wishes the Order to apply. The Order Verb is then written above the line, and the CONPLAN (if there is one), below it in brackets.

For the purpose of the Sync Matrix, placing an FE/Group in Reserve (see 2.1.13) counts as its Order. In this case Priorities for the Reserve FEs should also be noted after RES is written on the Sync Matrix.

TASK ORG:

1. 1 Pl Gp (Right flank)

- TACOM: 1 Pl, Atk Sect, 1 Tp MB
- TACON: FST

2. 2 Pl Gp (PORTON Force)

- TACOM: 2 Tp Recce, Pnr Sect
- TACON: MFC

Example #1: In the TASK ORG box of its CONOPS card, the Blue side has Task Organised 1 Pl (comprising 1 Pl WR (Warrior Platoon) and 1 PL INF (Infantry Platoon)), Atk Sect (1/Atk/1), and the Fire Support Team (FST1), into a Group called 1 Pl Gp. On the Blue Sync Matrix card, the Orders for 1 Pl Gp apply to all these four FEs which come under command of the 1 Pl commander.

Example #2: In Turns 1 and 2, 1Pl Gp has an Order to MOVE to (Hill) 96, to SECURE it in Turn 3, and in Turns 4 & 5 to HOLD it, but with a CONPLAN to Attack to support 2 Pl Gp if required. These Orders apply to all the FEs in 1 Pl Gp. By contrast, 3 Pl Gp is noted as being in Reserve (“RES”) for the whole duration of the game, and has its Priorities (“Pris”) noted down next to this.

SCENARIO 2 SYNC MATRIX (BLUE)					
FE ID	Turn 1	Turn 2	Turn 3	Turn 4	Turn 5
Coy HQ		Co-ops 2 Pl			
1 Pl Gp		MOVE to .96	SECURE .96	HOLD .96	
2 Pl Gp			MOVE to PORTON	(ATTK to SP 2 Pl)	
3 Pl Gp			RES (Pris: 2 Pl, 1 Pl)	SECURE PORTON	

4.0 SETTING UP THE FE COUNTERS

The SSIs will contain the start location for each side. This will typically refer to a grid location on the map. Each side places the FE counters as instructed in that space. Unless otherwise instructed they can be placed anywhere in the directed space.

Depending on the Scenario, sides may begin the game with a certain number of FE Concealed and a certain number of Dummy counters. Concealed FE are placed as normal, but on their ‘?’ side (see 2.1.15). Dummy counters always begin the game placed on their Concealed side (see 2.1.16).

4.1 MOUNTED FE

A Foot FE may be Mounted on a friendly vehicle FE (IFV/ APC) of equivalent size in the same Group at the start of the game (setup). It may Dismount, or Mount again, during the game.

A Mounted FE is placed on the FMC entry of the vehicle FE it is mounted on, in the Mounted column, rather than on the map. It is only placed on the map when it Dismounts (see 9.01 for Mounting/Dismounting). Mounted FE do not take Actions and may not be specifically targeted by enemy fire until Dismounted. However, they make take Hits if the vehicle FE they are in takes Hits (see 9.2.3.1).

Design note: Some FE, such as Mortars or Atk Sects, may come with their own organic transport. They do not have separate counters for these.

4.2 STACKING

An FE that comprises a Sect or smaller can Stack with another FE of Platoon or Troop size or larger if it is part of the same Task Group*. It can begin the game Stacked, or become Stacked when the Group is Activated if Co-located with that Platoon/Troop.

While Stacked, this unit cannot be individually selected as a target, and is Concealed if the FE they are with is Concealed (they cannot be Concealed if the Platoon/Troop is not Concealed).

Any Hits taken by the FE they are Stacked with can be distributed between both FEs at the owning player’s choice. The Platoon/Troop being targeted determines the target type for both units for the opposing side’s Firing/Assaulting DRMs. If the Sect Moves away from the Platoon/Troop, it is no longer considered Stacked.

***Play note:** Place the Stacked FE counter under the Platoon/Troop, or, if you wish the Platoon or Troop to be Concealed, place the Sect on the Mounted box of that Platoon/Troop’s FMC entry. That way it will not be obvious that the Concealed FE also has a Sect with it.

5.0 EXECUTION PHASE

The Execution Phase is the heart of the game. It begins once both sides have completed the Preparation Phase and comprises four Sub-phases, which must be resolved in order.

Once the Clean-up Sub-phase is finished, a new Turn begins, starting with the Command Sub-phase, or the game ends if that is the last Turn of the game (as set out in the SSI).

Each Turn should last around 30-45 mins depending on the Scenario.

- 1) COMMAND SUB-PHASE
- 2) INITIATIVE SUB-PHASE
- 3) ARC SUB-PHASE
- 4) CLEAN-UP SUB-PHASE

5.1 COMMAND SUB-PHASE

In the Command Sub-phase both sides simultaneously resolve the following steps:

- 1. RALLY
- 2. EW ACTIVITY
- 3. RE-ASSIGN
- 4. CONFIRM ORDERS

5.2 RALLY

In this step, each FE with a Morale Status marker takes a Morale Check to attempt to recover one or two levels of Morale Status (see 2.1.10 MORALE).

Play note: This step is skipped on Turn 1 as all FEs will be at Good Morale.

Apply an automatic recovery of one level if the FE is Co-located with an Un-Suppressed HQ or A1 Echelon. Then, roll 1D6 and apply the modifiers and results set out on the MORALE CHECKS TABLE on Player Aid 2.

Play note: This means an FE can recover two levels of Morale Status with one Rally.

An FE passes on a modified 1D6 roll of 4+. If the FE passes, improve its Status by one level. If the FE was on Suppression 1, remove the marker; it is now back to Good Morale.

Example: 1 PL INF has a Suppression 2 marker. It takes a Morale Check. Its Tac HQ C2 is 3, giving it a +1 DRM. No other modifiers apply. The die roll is a 3, which becomes a 4. This is a pass, so the Blue player flips the Suppression 2 marker on the FE to its Suppression 1 side. If 1 PL INF had been out of LoS of any enemy FE and/or Co-located with an un-Suppressed HQ or A1 Echelon, it would have automatically improved Morale one level, and then rolled to see if it improved another.

5.3 EW ACTIVITY

In this step, both sides draw a random EW Chit from the container set aside at setup (see 2.2). They then announce the number of Tx made the previous Turn, as noted on their Sync Matrix. The side with the lowest

number draws additional EW Chits up to the difference (max. 3) (if equal neither side draws a second chit).

Example: From the Sync Matrix below, at the start of Turn 2, it can be seen that this side made 3 x Tx in Turn 1 and lost 1 x FE eliminated.

EW TRANSMISSIONS / FRIENDLY FEs ELIMINATED	1 1 1 1	
--	------------	--

5.3.1 USING THE EW CHITS

There are 12 double-sided EW Chits in the game. The side holding the Chit(s) may play it either for its green or pink effect – not both. It is then placed back in the container.

A Chit drawn with “Immediate” must be played as soon as it is drawn, it cannot be held until later in the Turn (unless the side that drew it does not wish to play it, in which case it is placed back in the container).

A Chit with “Hold” may be played at any point in the Turn.

Any EW Chit not used on the Turn it is drawn is returned to the container in the Clean-up Sub-phase at the end of the Turn.

5.3.2 ELECTRONIC WARFARE TRANSMISSIONS

Certain Actions or effects in the game can generate Tx, as set out on the EW TRANSMISSIONS TABLE on Player Aid 7. As these are generated, they are noted down by the generating side on their Sync Matrix for that Turn.

Play note: Generating Tx is sometimes necessary but can be detrimental to a side if it generates more in a Turn than the opponent. This is because the side that generated fewer transmissions on the previous turn gets bonus EW Chit/s (see 5.3), and a positive DRM for the Initiative roll (see 6.0).

5.4 RE-ASSIGN

In this step, both sides can optionally Re-assign any number of FEs to a new Group or separate an FE from a Group to become an individual FE.

If Re-assigning to a new Group, and the FE is Co-located (within 250m) of an FE in the new Group, the FE is automatically assumed to be Re-assigned. Otherwise, it must use its Action for the Turn to Move to Co-locate with the new Group. If Re-assigning to become an individual FE, this happens automatically.

If an FE that was in a Group is Re-assigned, it Activates as part of the newly assigned Group. If it is to operate independent of a Group, it must have its own entry added to the Sync Matrix and be given New Orders (see 5.5).

5.5 CONFIRM ORDERS / IMPLEMENT CONPLANS

New Orders can be issued to a Group or individual FEs during this step. These replace the Orders for subsequent Turns on the Sync Matrix for the FE/Group. New Orders generate Tx and give a negative DRM for Initiative.

An FE receiving New Orders receives a REORG marker; it cannot be Activated on the current Turn, except to Attempt Spotting and to DirF.

To issue New Orders:

- 1. Strike through the existing Order (or Orders, if you also wish to amend Orders for later Turns at the same time) on the Sync Matrix and write down the new Orders.
- 2. Write STOP in the space for that Turn on the Sync Matrix against all FE receiving a New Order and place a REORG marker on the relevant FE.
- 3. Note down 1 Tx on the Sync Matrix (issuing new Orders generates 1 Tx Transmission per FE/Group being ordered – only record 1 Tx per FE/Group, even if you are changing multiple Turns of Orders for that FE/Group).

Example: The FEs in 1PI Gp are issued New Orders at the start of Turn 2. This is noted on the Sync Matrix by writing STOP and striking through their Orders for subsequent Turns. These are replaced by the new Orders. In Turn 2, all FEs in 1 PI Gp are given a REORG marker.

FE ID	Turn 1	Turn 2	Turn 3
Coy HQ		Co-loc 2 PI	
1 PI Gp		MOVE to .96 STOP	SECURE .96 MOVE to PORTON

5.5.1 IMPLEMENT CONPLANS

If an FE/Group has a CONPLAN as part of its Sync Matrix entry for the Turn, the relevant side can declare that it will be implemented. This replaces the Orders for that FE/Group going forward.

To apply a CONPLAN, the side declares in this step that a CONPLAN is being implemented for the relevant FE and notes a 1 Tx cost on its Sync Matrix. Score a line through the original Order to indicate the CONPLAN Order is now in place. The CONPLAN then becomes that FE's Orders for as long as stated on the Sync Matrix.

Unlike with issuing new Orders, the FE/Group can be Activated on the same Turn that the CONPLAN is implemented (no REORG marker is placed).

If no New Orders are issued or CONPLAN implemented, the current Orders are considered to be confirmed.

6.0 INITIATIVE SUB-PHASE

Initiative is critically important in BGWS. The Initiative side gets to Activate first in both the Action-Reaction Round and the Counteraction Round.

To determine the Initiative side, either follow the specific instruction in the SSI or both sides roll 1D6, applying the DRMs set out on the *INITIATIVE TEST TABLE* on Player Aid 1.

The side with the higher modified result is the Initiative side for the Turn.

If it's a draw, the side with the higher C2 Rating wins.

If both sides have the same C2 Rating, the dice are rolled again.

7.0 ARC SUB-PHASE

Movement and engagement in BGWS follow an Action-Reaction-Counteraction (ARC) sequence.

This is split into two Rounds: Action-Reaction, followed by Counteraction.

In the Action-Reaction Round, all FEs in the game Activate, being given Actions in line with their Orders.

In the Counteraction Round, FEs in Reserve that do not have a FIRED marker can optionally Move, then Hasty Assault or DirF. After this, FEs that have not FIRED can DirF.

7.1 ACTION-REACTION ROUND

In this Round, both sides alternate activating their FEs. The Initiative side begins by activating a Task Group, or an individual FE not in a Group. When a Group is Activated, all the FEs within it are Activated. This happens one FE at time. However, multiple FEs can be Activated simultaneously for a Combined Fire or Combined Assault (see 9.2.1 and 9.3, respectively).

Once the Activation is complete, the non-Initiative side does the same. Play continues with alternating Activations until all FEs/Groups have been Activated.

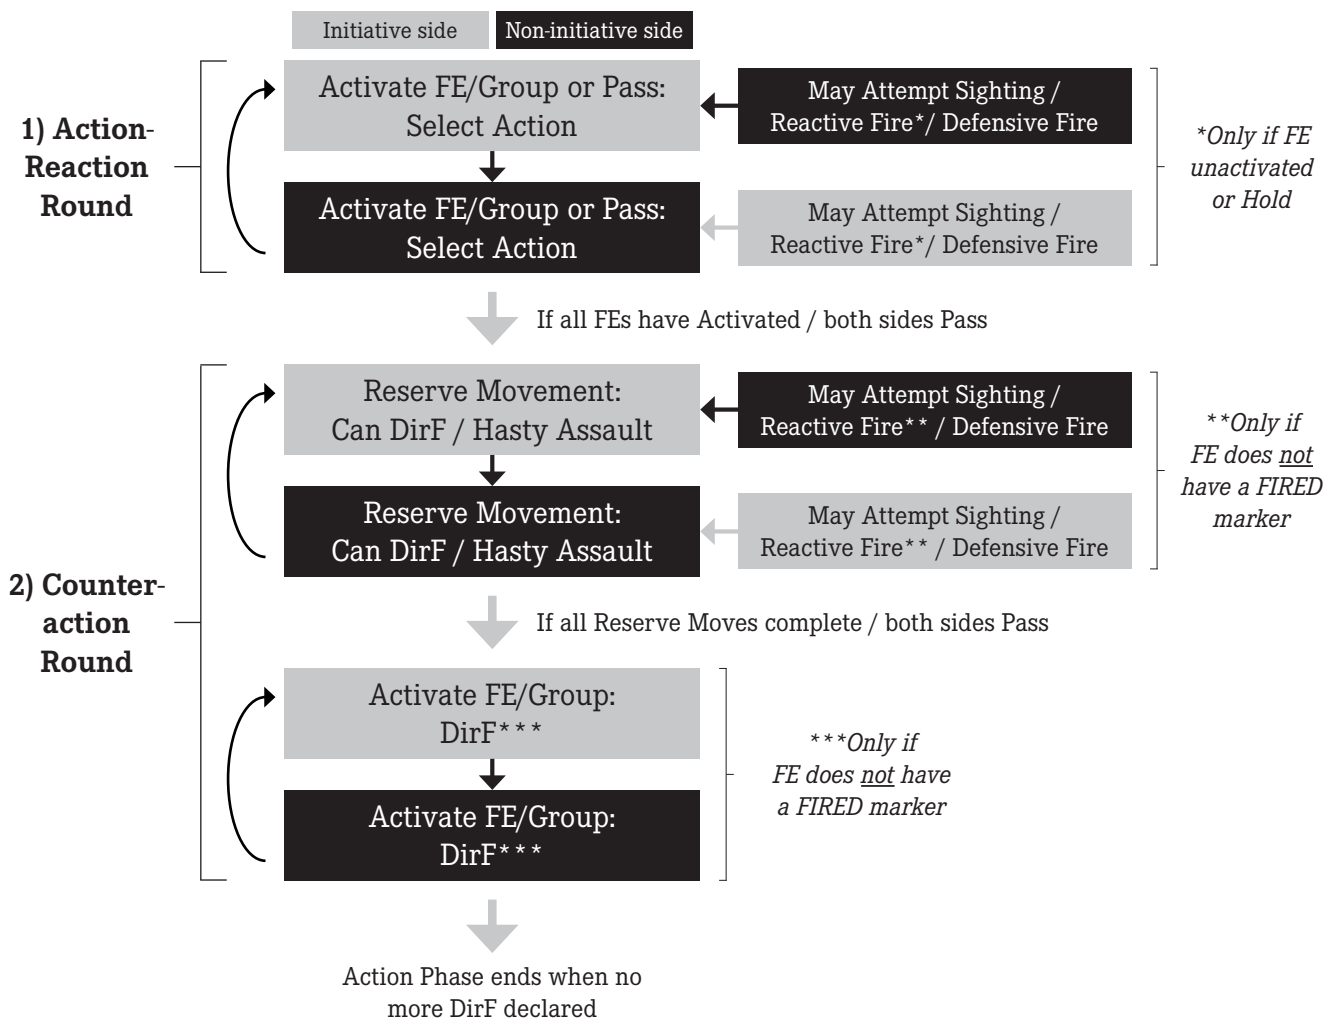

If one side runs out of FEs/Groups to Activate, the other side can Activate their remaining FEs/Groups, in any order.

A side may also opt to Pass – i.e. not make any Activation and pass the Activation option back to their opponent. If both sides Pass, then the Action-Reaction Round is finished, and the Counteraction Round begins.

An FE can only Activate once in the Action-Reaction Round. Activations are tracked by placing a strike through line in the Sync Matrix for that Turn of the FE/Group that has just finished activating (for a Group, when all the FEs in the Group have activated). While an FE/Group is Activating, FEs on the non-Activating side may not act except to:

- Attempt Sighting against a Concealed Activating FE (see 10.0)
- Reactive Fire (see 7.1.3)
- Defensive Fire if being Assaulted (see 9.3.2)

ACTION SUB-PHASE BREAKDOWN

7.1.1 HQ COMMAND ACTIVATIONS

HQs provide a vital role in coordinating activities on the battlefield. To reflect this, when an HQ Activates, either individually or as part of a Group, the Activating side may – optionally – also choose to Activate at the

same time other friendly FEs/Groups within Activation Range, up to the HQs C2 rating. This is called a Command Activation.

FEs within Command Activated Groups can be Activated in any order, and can be Activated simultaneously to

Combine Fire or Assault. Activation Range is as follows:

- Tac HQ – the other FE/Group must be within 1,000m*.
- BG HQ – no range limit.

**Only one FE in a Group that the HQ wishes to Activate needs be within the 1,000m range for all the Group to be Activated.*

Using a Command Activation generates 1Tx, regardless of the number of FEs/Groups Activated.

Design Note: *This mechanic provides a specific example of how BGWS looks to reward effective tactical play: the side that best positions its Tac HQ will be in the strongest position to combine movement, fire and assaults between Sub-units or Platoons to achieve its goals and conduct simultaneity of action.*

7.1.2 REORG

In certain situations, an FE may be required to have a REORG marker, meaning it cannot take an Action that Turn except to DirF and Attempt Sighting.

7.1.3 REACTIVE FIRE

It is possible for an FE/Group of the non-Activating side to interrupt a Move or Assault Action, including a Reserve Move, of an enemy FE by Firing (DirF only) at it while it is moving. This is called Reactive Fire. It reflects that FE/Group operating in an 'overwatch' capacity, with a remit to 'watch and shoot'.

In order to be able to Reactive Fire, all the following criteria must be met by the non-Activating FE/Group:

- It must have a BLOCK, CONTAIN, DEFEAT, DEFEND, DELAY, DISRUPT, FIX, HOLD, INTERDICT, SUPPRESS or TURN Order for that Turn.
- The target enemy FE must be moving in a TAI (as noted on its Planning Map). The Firing FE must have been tasked to that specific TAI.
- If it is the Action-Reaction Round, the reacting FE has not yet Activated, or has been given a Hold Action.
- If it is the Counteraction Round, it did not Fire in the Action-Reaction round (i.e. it does not have a FIRED marker).
- The moving FE must be within Range and LoS (as per a normal DirF – see 9.2.1).

If the criteria is met, the FE/Group:

1. Declares a DirF against the moving FE. Combined Fire is possible. The DirF is resolved as normal.

2. The moving FE halts while the DirF is resolved. After it is resolved the moving FE may continue its movement (unless it has become Disrupted or Broken – see *Morale Effects* on Player Aid 2), or it may elect to stop moving at that point.
3. The FE/Group that has Reactive Fired cannot take any further Action for the remainder of the Turn.

It is possible for multiple FE/Groups of the non-Activating side to take Reactive Fire against the same moving enemy FE, if the above criteria are met.

7.2 COUNTERACTION ROUND

Like the Action-Reaction Round, this Round follows alternating Activations between the Initiative and Non-initiative sides, but the Actions possible are limited to alternating Reserve Movement (only possible for FE/Groups in Reserve), and, once neither side can/wishes to conduct further Reserve move, DirF.

7.2.1 RESERVE MOVEMENT

A Reserve Move is the same as a normal Move Action but can only be taken by FEs with a Reserve Order (see 2.1.13) and no FIRED marker. These FEs can move up to 1,000m towards a priority, as set out on the Sync Matrix. They can do this even if they have a MOVED marker. Issuing a Reserve Move Order in the Counteraction Round generates 1 Tx per FE/Group.

A Reserve Move can be subject to Reactive Fire by any enemy FE/Group in Range and LoS that does not have a FIRED marker (see 7.1.3).

At the end of its Move, the Reserve FE/Group can DirF or Hasty Assault (including to Reinforce an ongoing Assault that has moved into Melee (see 9.3.9)).

7.2.2. COUNTERACTION FIRE

Any FE/Group **that does not have a FIRED marker** (i.e. that did not Fire in the Action-Reaction Round) can DirF in the Counteraction Round.

This follows the standard DirF procedure (note that DRM penalties for Firing in the Counteraction Round apply). Combined Fire is possible. FEs/Groups of the Initiative and Non-Initiative side alternate taking DirFs.

When a side decides that it does not wish to, or cannot, DirF, it declares it is Passing. A side that has passed cannot at a later point, after seeing the other side's DirFs, then declare that it wishes to DirF. Passing is final for the Turn.

8.0 CLEAN-UP SUB-PHASE

In this Sub-phase both sides:

1. Remove all MOVED, FIRED and SMOKE markers from the map. Artillery/Mortar markers may remain in place.
2. Remove REORG markers if they were placed as

a result of New Orders this Turn, or an Assault last Turn (ones placed following as Assault this Turn remain in place). MELEE markers remain in place.

3. Advance the game Turn by striking through the current Turn on their Sync Matrix card.

9.0 ACTION TYPES

There are four Action types: Move, Fire, Assault and Hold. The Action type selected must be one that best allows the FE to fulfil its Order. **It is down to the discretion of the player to determine which Action is most appropriate at that point in time to fulfil the Order.**

Example: *The FEs in 1Pl Gp will usually be given the same Action to fulfil their common Order – e.g. on Turns 1 and 2, a Move to Hill .96. However, they can be given different Actions, for example to SECURE .96, the Blue side could decide that elements of 1 Pl Gp should Assault Red forces already there, while other elements of 1 Pl Gp Move to provide supporting Fire on a flank.*

As an exception to this, an FE may only take a Reactive Fire Action if it is under certain Order verbs (see 7.1.3).

An FE's Action is considered to begin as soon as the FE Activates and lasts for the duration of the Turn. This is intended to abstractly capture the reality that both sides would be undertaking Actions at the same time, one in Reaction to the other.

This is important as certain game effects apply to certain Actions throughout the Turn.

Example: *If a side Indirect Fires at an enemy FE with a MOVED marker, that enemy FE is still considered to be 'Moving' for DRM effects, even though it has finished its movement on the map.*

9.01 MOUNTING & DISMOUNTING

When a Foot FE is Activated, it may Mount or Dismount a vehicle. It may also Dismount at any point during the vehicle's Activation if that vehicle is Moving. In this case, the Dismounting FE's counter is given a MOVED marker, and may be placed up to 250m from where it

Dismounted. It may not be Activated on the same Turn. To Mount during the game its counter must be Co-located with the vehicle it wishes to Mount (i.e. within 250m).

9.1 MOVE

A Move Action allows an FE/Group of FEs to Move up to its Maximum Allowable Distance. Place a MOVED marker on the moving FE. **An FE may not Move if it has Fired** (i.e. has a FIRED marker).

The Maximum Allowable Distance is a figure between 1 and 6. Each value represents 1,000 metres (e.g. 3/2 means 3,000m/2,000m) – the same as 1 Grid Square on the map. The Maximum Allowable Distance depends on the Movement Type, the FE Type, and the Terrain Type being moved across. The impact of these three factors is set out on the **TERRAIN EFFECTS TABLE** on Player Aid 3.

This sets out:

- **MOVEMENT TYPE:** There are two types of Movement: **Tactical (Tac)** and **Column**. Column is only possible if: a) the FE moves on Roads for the full Movement, and b) if there is no LoS at any point of the Move to an enemy FE, excluding UAS/RPAS.
- **FE TYPE:** An FE may be: Foot (F), Wheeled (W), or Tracked (T). The FE Type of each FE is set out on its FMC entry.
- **TERRAIN TYPE:** The Terrain Effects Table sets out a variety of different Terrain types that may feature on the map. If an FE moves across more than one Terrain Type during its move, adjust the distance it can Move accordingly.

Example: *The Red 1Pl INF FE has Orders to Move to a location 2,000m away. Half the distance it can move by Road, but the remaining distance is over Open Terrain. 1Pl INF is a Foot unit, so consulting the Terrain Effects Table, the*

Red player sees that moving 1,000m on Road represents 50% of its Maximum Allowable Distance (Foot FEs have a maximum Tac distance of 2km on Road). This means it can only move 500m over the Open Terrain (which is 50% of its maximum distance of 1,000m over Open Terrain). At the end of its move, it is 500m away from its target destination.

9.2 FIRE

There are two types of Fire Action an FE on the map can take: Direct Fire (DirF) or Indirect Fire (IDF); the latter is only possible for Mortar FEs. Separately, a side can IDF using Artillery/Air/Attack Helicopter (A3), depending on the Scenario. There are specific rules for this, as set out in 9.2.2.2.

Any FE can DirF as its Action in the Action-Reaction Round. Only FEs that do not have a FIRED marker can Fire in the Counteraction Round*.

***Exception:** Any FE can DirF in the Counteraction Round as Defensive Fire if it is the subject of a Hasty Assault (see 9.3.2).

IDF (Mortar or A3) is only possible in the Action-Reaction Round.

9.2.1 DIRECT FIRE

An FE can DirF against an enemy FE that is in its LoS and within Range of its Capabilities. Each time an FE DirFs, it reduces its Ammo by 1. An FE on 0 Ammo can only DirF at a CS of 1.

The strength of the attack is usually* determined by the Firing FE's CS, modified by the effect of its Capabilities (see 2.1.7 COMBAT STRENGTH and 2.1.7 CAPABILITIES).

***Exception:** A separate approach is used if the Firing FE is using Anti-Tank Missiles (ATM), see 9.2.1.1.

An FE that is Firing always has a CS of at least 1 for determining Hits (e.g. if a Firing FE has a CS of 2, but a -2 modifier due to range or other Capability considerations, it would count as having a CS of 1 for determining Hits against the enemy).

Remember:

Apers: Apers Capabilities may only be used against Foot FEs and soft-skinned Wheeled vehicles.

Atk: Atk Capabilities may be used against any vehicle FE, but not Foot FEs.

There are two modes of DirF: Individual or Combined:

- **INDIVIDUAL:** Where a single FE DirFs against a single FE.

- **COMBINED:** Where multiple non-Mounted FEs within 250m of each other are Activated simultaneously to DirF, targeting the same single enemy FE.
- With Combined DirF:
 - No participating FE can already have a FIRED marker.
 - The CS of the activating non-Mounted FEs – after accounting for Capabilities – is combined.
 - The FEs can be in different Groups if those Groups have been simultaneously Activated by a Command Activation.

9.2.1.1 ANTI-TANK MISSILES

Some FEs may have Anti-tank Missile (ATM) Capabilities, as noted on their FMC entry. Where this is the case, the owning side must declare before they Fire if the FE is using the ATM or their other Atk Capability (if they have one). They cannot use both simultaneously.

ATM does not use CS to determine an attack strength. Rather it has a dedicated column on the Fire Results Table that applies (the same as IDF weapons – see image below), regardless of the CS of the Firing FE. It also has its own Ammo usage boxes.

FIRE RESULTS TABLE		
7-12 (81-105mm/RPG)	13-19 (120mm/ NLAW/ATM)	20-24 (150mm/ Javelin/Cluster)
3	4	4
2	3	3
2	2	3

FEs using ATM cannot Combine DirF. The Fire is resolved separately.

9.2.1.2 RESOLVING DIRF

1. Declare the target – it must be Sighted, in LoS and Range.
2. Declare which FE (or FEs for Combined DirF) is Firing.
3. Calculate the CS of the DirF based on the (combined) CS of the Firing FE(s) and any Capabilities modifiers. If ATM, refer to the relevant column on the FIRE RESULTS TABLE.
4. Roll 2D6, then apply the modifiers in the DirF MODIFIERS TABLE (Player Aid 4) to the total rolled (effects are cumulative). For Combined DirF use the most detrimental modifiers to the Firing side to determine DRMs*.
5. Based on the final modified total, apply the effects on the FIRE RESULTS TABLE (Player Aid 4).

6. Reduce the Ammo of all firing FE by 1.
7. Add a FIRED marker to the Firing FE(s) and flip the FE(s) from its Concealed side, if not already Sighted.

***Example:** *If two FEs in a Group are Combined Firing and one has a Suppression 2 marker and the other a Suppression 1 marker, a -2 is applied to the roll.*

9.2.2 INDIRECT FIRE

There are two types of IDF: A3 and Mortars (Mortar FE). A3 is abstracted – there is no FE representing the A3 unit on the map.

IDF can only be used in the Action-Reaction Round by an Activating side. It cannot be used:

- For Defensive Fire.
- For Reactive Fire.
- In the Counteraction Round.

Unlike DirF, IDF:

- **Applies an area-effect** – If a Hit is achieved on the targeted FE, other FEs (Friendly or Enemy) within 250m of it may take a level of Morale Status loss.
- **Can be used against Concealed enemy FEs that have been ‘Partially Sighted’** (i.e. they have received a roll of 8-9 on an Attempt Sighting) – As long as there is LoS to the target (however a DRM penalty will apply).

9.2.2.1 MORTARS

An Activated Mortar FE can IDF at a target in Range without LoS, provided a friendly FE has LoS to the target.

Each time a Mortar FE fires at a target when it does not have LoS to the target – i.e. it is being directed to Fire by a friendly FE – this generates 2 Tx for the Firing side*. If the Mortar FE has LoS itself, then it does not generate any Tx.

9.2.2.2 ARTILLERY/AIR/ATTACK HELICOPTERS

A3 is a type of FE in that it can be Activated. It is considered an individual FE on the Sync Matrix, but it does not have a counter to manoeuvre on the map. It can only Activate in the Action-Reaction Round. This is known as a Fire Mission.

It can be used to target enemy FEs anywhere on the map, provided that a friendly HQ/Recce/Fire Support Team has LoS to the enemy being targeted (and the targeted FE is either Revealed or has been Partially Sighted).

The following rules apply:

- A3 can reach any location on the map – there are no Range limits.
- An HQ/Recce/Fire Support Team must have LoS to the target.
- A3 (except Smoke) cannot be used to target an enemy FE located within 500m of a friendly FE.
- Each type of Fire Mission can only be used once per Turn (unless otherwise specified).
- Each time an A3 Fire Mission is used, it generates 2 Tx for the Firing side*.

The SSI will set out how many Fire Missions per A3 type each side can use during the game. Each time a Fire Mission is requested, the available number is reduced by one on the FMC. If/when it reaches zero, no more Fire Missions for that type may be used (unless otherwise specified by the SSIs).

**If Persistent Fire, only 1Tx.*

9.2.2.3 PERSISTENT MORTAR/ARTILLERY FIRE

Artillery and Mortars use specific game markers. When these types of IDF are used, the marker is placed on the target FE.

It remains on the target FE until either:

- a) the target FE moves; or
- b) a different FE is targeted by that Artillery/Mortar type.

While the marker is on that FE, all subsequent IDFs of the same type against that target receive a +1 DRM bonus, and generate 1 less Tx.

9.2.2.4 FIRING SMOKE

If the SSI allows, Artillery and Mortars can IDF Smoke instead of a standard round. No roll is required. A SMOKE marker is placed on an area location on the map – rather than an FE – that is within Range (Mortars only), and that a relevant friendly FE has LoS to.

Any area within a radius of 250m of the SMOKE marker is impacted by it. This is relevant for:

- DirF – any FE firing from, through or into Smoke suffers a -2 DRM for DirF.
- Attempt Sighting – any FE that Attempts Sighting from, through or into Smoke suffers a -2 DRM.
- Assault – if Smoke is present, an assaulting FE/Group gets a +2 DRM for achieving Surprise.

The SMOKE marker is removed during Clean Up.

9.2.1.5 RESOLVING IDF

1. Activate the A3 or Mortar FE for IDF. If Mortar FE, flip it from Concealed unless it is firing outside of enemy LoS.
2. Declare the target FE and confirm LoS. If using Mortars it must be within Range.
3. If Smoke, place the SMOKE marker on the target area, then go to Step 6.
4. Roll 2D6, then apply the modifiers to the total rolled (see *IDF MODIFIERS TABLE* – Player Aid 4).
5. Based on the final modified total, apply the effects on the *FIRE RESULTS TABLE* for that IDF type – see Player Aid 4. If a Hit is scored on the target FE, apply an ‘S’ result to any other FE within 250m of the target FE.
6. Reduce the Ammo of the firing FE by 1. If A3, reduce the number of available Fire Missions of that type by 1.
7. If Mortar, add a FIRED marker to the Mortar FE. If A3, add a FIRED marker to the A3 row on the Sync Matrix.
8. Note down the Tx generated.

9.2.3 FIRE RESULTS

Both IDF and DirF use the same results table to determine the effects of the Fire Action on the target FE(s).

Cross-reference the modified dice roll against the (combined) Combat Strength/ATM/IDF type used on the *FIRE RESULTS TABLE* (Player Aid 4).

9.2.3.1 APPLYING HITS

For each Hit received, the CS of the target FE is reduced by 1. This is noted down on its FMC. Each FE that receives a Hit also drops one level of Morale Status, as does any (Enemy or Friendly) non-armoured vehicle FE within 250m of an FE suffering a Hit from IDF (exc Air/AH). IDF of 120mm+ also cause Suppression to armoured vehicles within 250m.

If an FE receives an S result instead of a Hit, it drops one level of Morale Status (other FEs within 250m are unaffected).

The effect of Hits is as follows:

- Targeted FEs that lose over half their starting CS from a single Fire Action lose 1 TQ (note it on the FMC).
- Targeted FEs that are reduced to zero CS are Eliminated.

MOUNTED/STACKED FEs

Hits cannot be assigned to an FE Mounted in a vehicle. If a vehicle FE containing Mounted FE receives a Hit or ‘S’ result, roll 1D6.

On a 1-3 result, the Mounted FE receives a Hit or ‘S’ result too (roll for every Hit the vehicle receives). This Hit is in addition to the Hits generated by the Fire/Assault result. *Exception:* if the FE is Mounted in a soft-skinned vehicle, it always receives the additional Hit.

Hits can be assigned to Stacked FEs at the owning side’s discretion (see 4.2).

9.2.3.2 ELIMINATED FE

Eliminated FE are removed from play. Note down how many FEs are Eliminated during a Turn (it impacts on the Initiative roll in the following Turn).

If a vehicle is Eliminated but a Mounted FE inside it has CS remaining, the Mounted FE’s counter is placed where the Eliminated vehicle counter was. This FE’s Morale decreases by an additional one level.

9.3 ASSAULT

An Assault allows an FE/Group to launch a close quarters attack against a location as the “attacker”. Any enemy FE/Group within 250m of the location participates in the Assault as the “defender”.

An Assault can generate casualties on both sides and uses more Ammo than DirF. If successful, an Assault may force an enemy FE to Retreat.

Assaults can be made by either side. Generally, if it occurs in the Action-Reaction Round, it is a **Deliberate Assault**, and if it occurs in the Counteraction Round (by an FE/Group in Reserve) it is a **Hasty Assault**. However, as an exception, if the Assault is the result of an FE/Group Reinforcing a Melee (9.3.9), it is considered a Hasty Assault. A Hasty Assault is the same as a Deliberate Assault, but with a negative modifier for the attacking side.

The strength of an Assault is based on the attacking FEs Foot CS. Capabilities do not apply unless otherwise specified. The CS of vehicle FEs in the Assault do not apply.

Resolving an Assault is more complicated than a Fire as it factors in Surprise and Defensive Fire. Furthermore, unlike other dice-based resolutions in the game, there are no DRMs when resolving an Assault. Instead,

positive or negative contributory factors are captured by Column Shifts on the [ASSAULT COMBAT RESULTS TABLE](#). Rightwards Column Shifts benefit the attacker, leftwards the defender.

As with DirF, there are two modes of Assault: Individual or Combined:

- **INDIVIDUAL:** Where a single FE Assaults the location.
- **COMBINED:** Where multiple FEs in the same Group – or potentially multiple Groups if triggered by a Command Activation – are Activated simultaneously to Assault the location*. With Combined Assaults the CS of the attacking Foot FEs is combined.

**Design note: This is different to Combined DirF, which can only target an individual enemy FE. An Assault draws in all enemy FEs within 250m of the target location.*

In both cases there are restrictions on which FE can Assault. Attacking FEs must:

- Be within 1,000m of the target location.
- Have at least 2 Ammo remaining.
- Have Foot FEs participating in the Assault (they can begin the Assault Mounted but must Dismount following Defensive Fire).
- Not have a FIRED marker.
- Not be Disrupted/Broken.

Further, the target location must have a Sighted enemy FE present.

9.3.1 SURPRISE

Prior to the Assault, the attacking side rolls to see if they achieve Surprise. Surprise provides a positive column shift, and enemy FEs may not Reactive Fire or Defensive Fire. The DRMs are set out on the [ASSAULT SURPRISE TABLE](#) – Player Aid 6.

9.3.2 REACTIVE AND DEFENSIVE FIRE

FEs of the defending side that are not part of the Assault (i.e. not within 250m of the Assault location) may Reactive Fire against the Assaulting FE(s) if there is a) no Surprise, and b) the criteria of Reactive Fire is met (see 7.1.3).

Following this, again only if there is no Surprise, defending FEs (i.e. those directly participating in the Assault), can Defensive Fire. This is resolved as an individual DirF (with a -2 DRM – see [DF MODIFIERS TABLE](#)).

Combined Fire is not possible. IDF is not possible.

Any Hit/S results are applied before resolving the Assault.

9.3.3 IDF ON DEFENDER

If one or more of the defending FEs has been the target of IDF this Turn (regardless of the result), the attacking side gets a right Column Shift bonus in the Assault.

9.3.4 RESOLVING ASSAULTS

Assaults in BGWS are an involved process, reflecting the myriad of learning points related to such a complex and risky Action. It is very important to following the steps below precisely!

1. Move the Assaulting FE(s) into the Assault Location (cannot be more than 1,000m away)*. The Assault Location must have a Sighted enemy FE present. Then move all other enemy FEs within 250m into contact with the Assaulting FE(s). If Concealed, they become Sighted. **They are assumed to have moved into the Assault from a Forming Up Point (FUP).*
2. Roll for Surprise. Roll 1D6, applying the modifiers on the [ASSAULT SURPRISE TABLE](#) (Player Aid 6):
Result:
 - 1-3 No Surprise
 - 4-6 SurpriseFlip Concealed attacking FEs to Sighted.
3. If No Surprise, FE's on the defending side not participating in the Assault may Reactive Fire (if criteria met). Then defending FEs (participating in the Assault) may Defensive Fire.
4. If the defending side has any Dismounted Foot FEs present at the Assault Location (i.e. not counting Mounted FEs inside vehicles at the location), then go to step 5. Otherwise:
 - **If only Vehicle FEs are present for the defender, without Mounted FEs:** the Vehicles automatically withdraw (see 9.3.7). All attacking and defending FEs are given a MOVED marker, and the Assault is over (ignore all the other steps below). No Ammo is expended, and no REORG is required.
 - **If only Vehicle FEs are present for the defender, but with Mounted Foot FEs inside them:** the vehicle FEs may optionally withdraw, in which case see bullet above. Alternatively, the defending side may Dismount the Foot FEs. The Dismounting Foot FEs reduce their Morale Status by one level. Then go to step 5.

5. Attacker must Dismount any Foot FEs in vehicles.
6. Determine the **Combat Strength Ratio** between the Attacking and Defending Foot FEs (vehicle FEs do not contribute). Any defending FE with less than 2 Ammo, or those without Ammo listed (HQ units etc), only contributes 1 to CS. This will determine the starting Odds Column used on the *ASSAULT COMBAT RESULTS TABLE* (Player Aid 6).
 - To do so, calculate the total *separate* CS of each side's non-vehicle attacking (i.e. Foot) and defending FEs. Do not apply Capability factors unless otherwise specified.
 - Then divide the attacker value by the defender value, and round down to get a Strength Ratio (e.g. attacker CS 18, defender CS 5 = Strength Ratio of 3:1; attacker CS 4, defender CS 9 = Strength Ratio of 1:2).
7. Determine the final Odds Column that will be used Shifts based on the *ASSAULT COLUMNS SHIFTS TABLE* (Player Aid 6) (the effects are cumulative – for TQ and Suppression, apply the most detrimental effect for that side).
 - Net the difference between applicable Ls (Left shifts – defender's favour) and Rs (Right shifts – attacker's favour) on this table and move the starting Odds Column this many columns left (L) or right (R). The result is the final Odds Column that will apply (e.g. the starting column based on the Combat Strength Ratio is 3:1. After applying all the modifiers on the Assault Column Shifts Table it is an L2, so the final Assault Column used is 2:1, as this is two columns left of 3:1 on the Results Table).
8. Roll 2D6 and cross reference that against the final Odds Column on the *ASSAULT COMBAT RESULTS TABLE* (Player Aid 6).
9. Reduce the Ammo of all attacking and defending (if possible) FE by 2.
10. Apply any Hits, then Retreats/Withdrawals. If neither side has a Foot FE remaining, they must Withdraw – Attacker first, in which case the Defender must remain. The Attacker must also Withdraw if no attacking Foot FEs have at least 2 Ammo remaining.
11. If both sides remain, a Melee begins.
12. Unless there is a Melee, when the Assault is finished, place a FIRED marker and a REORG marker on all attacking and defending Foot FEs and a MOVED marker on all participating vehicle FEs.

9.3.5 APPLYING HITS IN ASSAULTS

Hits and Eliminations from the Assault are applied exactly the same as with Fire (see 9.2.3.1). However, unlike with Fire, a Hit does not automatically mean the FE drops one level of Morale Status (see *Retreats* below).

9.3.6 RETREATS

If a side receives a Retreat result (**pink** or **green** box), it must Retreat, ending the Assault.

FEs that Retreat must Move a minimum of 500m, and may move up to 1,000m, away from the enemy. Retreating attacking FEs must Move in the direction they Assaulted from. Defending FEs must move away from the attacking FE, towards their side's starting area (as set out in the SSI).

Any Retreating FE(s) drops one additional level of Morale Status. A Retreating FE may not be subject to Reactive Fire.

9.3.7 WITHDRAWAL

A side that does not receive a Retreat result may optionally decide to Withdraw, ending the Assault. The attacking side must Withdraw if no attacking FE has at least 2 Ammo remaining, or there is no attacking Foot FE remaining. The attacking side declares first. If it decides to Withdraw, the defending FE(s) must remain in place.

FEs that Withdraw must move a minimum of 500m, and may move up to 1,000m. Attacking FEs must withdraw in the direction they Assaulted from. Defending FEs must move towards their side's starting area (as set out in the SSI).

A Withdrawing FE may not be subject to Reactive Fire.

9.3.8 MELEE

If neither side Retreats or Withdraws, a Melee begins. This fixes all the attacking and defending FE in place. They receive a MELEE marker. The MELEE marker is not removed at the end of the Turn.

The only Action they can take while they have a MELEE marker is on subsequent Turns to Retreat, DirF against the enemy FE that are currently in the Melee, or continue with the Assault. If a friendly FE/Group Reinforces, an Assault may occur again on the Turn the MELEE marker is placed (see 9.3.9).

This marker remains in place (including on subsequent Turns) until:

1. One side is Eliminated.

2. One side declares a Retreat or is forced to do so (this is upon the FE/Group's Activation).

9.3.9 REINFORCE

A side may give an FE/Group not in the Melee a Hasty Assault Action to Reinforce friendly FEs in a Melee (must be within 1km). This can also happen in the Counteraction Round with a Hasty Assault Action. If this happens a new round of Assault begins immediately (from step 5).

9.3.10 REORG

At the end of an Assault or Melee, all participating FE must REORG. This requires a full subsequent Turn. Place a REORG and a FIRED marker on all participating

Foot FE to note this. All FE may position themselves anywhere within 250m of the Assault once concluded.

Vehicles are not marked REORG/FIRED, but receive a MOVED marker.

9.4 HOLD

A Hold Action means that the FE fulfils its Order by remaining in position.

As part of a Hold Action, an FE can be repositioned up to 250m, reflecting limited tactical repositioning. This does not require a Moved marker.

An FE with a Hold Action can also subsequently Reactive Fire.

10.0 ATTEMPT SIGHTING

An Attempt Sighting can be made by an FE against a Concealed Enemy FE to which it has LoS.

Note that Attempt Sighting is not an Action, and can be done in the following situations:

- An **Activating FE** can only make one Attempt Sighting. It can do this at any point during its Activation.
- Any one non-Activating FE can make an Attempt Sighting Action, regardless of if it has already made one this Turn, to attempt to Sight an enemy Activating FE in its LoS.

To resolve an Attempt Sighting:

1. Roll 2D6, then apply the modifiers on the *ATTEMPT SIGHTING TABLE* (Player Aid 7) (effects are cumulative) to the total rolled.
2. Apply the results as set out on the *SIGHTING RESULTS TABLE* (Player Aid 7).

It is possible to achieve only a Very Partial or Partial Sighting result. This result should be noted down by the Sighting side, both for general enemy force intel purposes, and specifically because a Partially Sighted Concealed enemy FE can be targeted by IDF (see 9.2.2).

11.0 LOGISTICS

Logistics are used to move Ammo to FEs. Each A1 Echelon or Supply Pl will hold a specified amount of reserve Ammo that can be transferred, when requested as a Replenishment Demand (REPLENDEM).

11.1 REPLENDEM

A REPLENDEM is not an Action or Order. It can be made by any FE as part of its Activation in the Action-Reaction Round. Making a REPLENDEM **generates 1 Tx for the Activating side**.

Once a REPLENDEM is made, an A1 Detachment carrying a maximum of 8 Ammo* can be given a Move Action to move the Ammo to the requesting FE. This can

occur in the same Turn that the REPLENDEM is made, providing the A1 Detachment is available and has not already Activated.

Once the A1 Detachment has Moved into contact with the requesting FE the Ammo is considered delivered and can be transferred. Replenishing takes a full Turn. The FE that requested REPLENDEM (and any with it as part of the Group) receives a REORG marker for the rest of the Turn.

An A1 Detachment can be targeted by enemy Fires like any other FE.

**The amount of Ammo will be specified in the SSI.*

GLOSSARY

Action (2.1.4) – An action an FE can take when Activated. There are four possible Actions in the game: Move, Fire, Assault and Hold.

Activation (2.1.4) – The process of giving an FE an Action. Each FE can only be Activated once per Turn. Sides Activate on an alternating basis, with the Initiative side Activating first.

Ammo (2.1.9) – Used during Fire or Assault Actions. Each FE has a set amount of Ammo, that reduces following these Actions.

Anti-personnel (Apers) (2.1.8) – A type of weapon Capability that can only be used against Foot and soft-skin vehicle FEs.

Anti-tank (Atk) (2.1.8) – A type of weapon Capability that can only be used against vehicle FEs.

Assault Location (9.3.4) – The point on the map where FEs from the attacking side are placed at the beginning of an Assault.

Broken – See Morale Status.

Co-located – An FE within 250m of another Friendly FE is Co-located with it.

Command (C2) Rating (2.1.11) – The leadership effectiveness of a Tac/BG HQ. Used for Morale, Assault, Initiative checks and Command Activations.

Capabilities (2.1.8) – Specific to each FE, primarily related to the weapons it can use, but also any other factors specific to that FE.

Column Shift (9.3) – Used during Assaults instead of a DRM to account for variable force multipliers on the Assault.

Combat Strength (CS) (2.1.7) – An FE's inherent resilience and capability in combat. Used to determine how much combat power an FE can bring to bear in Fire and Assault Actions, and how many Hits it can take before it becomes Eliminated.

Command Activation (7.1.1) – The Activation by an HQ of other FEs/Groups outside of its Task Group, up to its C2 Rating.

Concealed (2.1.15) – An FE flipped on its '?' side. It cannot be targeted by DirF or Assaulted. Removed if the opposing side completes a successful Attempt Sighting, the Concealed FE Fires, or as the result of an EW Chit effect.

Contingency Plan (CONPLAN) (2.1.12) – Drafted in the Sync Matrix, it is a type of Order that an FE can follow if its main Order is deemed no longer relevant.

Control Measure (3.2.2) – Set out in the Preparation Phase to cover factors such as Assembly Areas and Boundary Lines.

Decision Point (3.2.2) – Triggers set out in the CONOPS on when a CONPLAN can be triggered.

Dice Roll Modifier (DRM) (2.1.1) – A positive or negative modifier applied to a dice roll to reflect real world factors that have an effect.

Dismounted (9.1) – A Foot FE that is no longer Mounted inside a Vehicle FE.

Disrupted – See Morale Status.

Eliminated (2.1.7) – When an FE reaches zero CS as a result of Hits, it is Eliminated and removed from the game. *Exception:* A Coy HQ can be reconstituted.

FE Type (9.1) – An FE on the map is either Foot, Wheeled or Tracked. This refers to how it transports itself, and impacts on Maximum Allowable Distance, and Fire and Assault DRMs.

Foot – See FE Type.

Force Management Chart (FMC) (3.1.1) – Provides the ORBAT for each side for the Scenario, and stats and Capabilities for each FE in the game.

Group – See Task Organising.

Hits (9.2.3) – The result of an enemy Fire Action, or from an Assault. Reduces the CS of the hit FE by 1 for each Hit received.

Line of Sight (LoS) (2.1.14) – The ability of a Firing/Sighting FE to see an enemy target/Concealed FE. Blocked by intervening Terrain.

Maximum Allowable Distance (9.1) – The maximum distance an FE can move during a Move Action. It varies based on the Terrain Type and FE Type.

Melee (9.3.8) – Where an Assault ends with neither side Retreating or Withdrawing.

Morale Status (2.1.10) – An FE is by default at Good Morale, but its Morale Status will drop as it receives Hits or 'S' results from Fire. There are five levels: Good, Suppressed 1, Suppressed 2, Disrupted and Broken.

Mounted (4.1, 9.1) - A Foot FE that is inside a Vehicle FE.

Named Area of Interest (NAI) (3.2.2) - An Observation Area determined in the Planning Phase. Provides a positive DRM for Attempt Sighting against Concealed Enemy FEs in it.

New Order (5.6) - Issued in the Command Sub-phase when an Order is no longer considered appropriate for an FE/Group. Requires that the receiving FE/Group is given a REORG marker for the Turn.

Observation Area (3.2.2) - An area designated on the Planning Map as a NAI/TAI.

Order of Battle (ORBAT) (3.1.1) - Provided as part of the FMC, listing which FEs each side has in the Scenario.

Order (2.1.12) - Drafted in the Sync Matrix using the Order Verb Table. The Order sets out what the FE/Group is expected to achieve for the Turn.

Pass/Passing (7.1) - A side may Pass if it does not want to Activate. If both sides Pass the Action-Reaction Round ends. A side may take an Activation again if the opposing side does not also pass.

Planning Map (3.2.2) - An A4-sized copy of the game map, used for noting down Observation Areas and Control Measures.

Range (2.1.8) - Each weapon used has a Max Range, which is the maximum distance it can reach. A weapon's Short Range is less than 51% of its Max Range. Its Long Range is between 51% and 100% of Max Range.

Reinforce (9.3.9) - Where an FE/Group moves into contact with other FE's in a Melee. It begins another round of Assault.

REORG (7.1.2) - A type of Order that means the FE cannot take any Action except to Direct Fire and Attempt Sighting.

Reserve (2.1.13) - A type of Order that allows an FE/Group to Move and Assault/Fire in the Counteraction Round.

Retreat (9.3.6) - Where an FE/Group is forced to move 500-1000m away following an Assault.

Scenario (3.1) - The setting of the game. There are four Scenarios provided with the game. Players can create additional Scenarios using the Optional Rules.

Sighted (2.1.15) - The opposite of Concealed. A Sighted FE can be targeted by DirF and subject to Assaults. An FE may only be Partially or Very Partially Sighted. This means the opponent has some information about the nature of the FE, but may not target it for DirF or Assault.

Special Scenario Instruction (SSI) (3.1) - Provides the background to the Scenario, and any Scenario-specific rules.

Stacked (4.2) - Where a Sect or smaller is placed with a Platoon or Troop and cannot be selected as a target.

Suppression - See Morale Status.

Synchronisation (Sync) Matrix (3.2.3) - Sets out the Orders and CONPLANS relevant to each FE, by Task Group.

Target Area of Interest (TAI) (3.2.2) - An Observation Area determined in the Planning Phase. Allows for Reactive Fire, in which an effect is desired, against moving Enemy FEs in it.

Task Organising (2.1.5) - Assigning individual FEs into a larger Group to achieve specific objectives. All the FEs in a Task Organised Group can be Activated at the same time.

Terrain Type (9.1) - A game map features multiple Terrain Types. The Terrain type an FE is in or moving through can affect movement and Fire/Assault DRMs.

Tracked - See FE Type.

Troop Quality (TQ) (2.1.6) - An FE's training and willingness to fight. Used when testing Morale, Direct Fire and during Assaults.

Tx (5.3) - A radio Transmission generated by activities such as calling Indirect Fire or issuing New Orders. It determines the number of EW Chits drawn, and provides a DRM on the Initiative check.

Wheeled - See FE Type.

Withdrawal (9.3.7) - Where an FE/Group moves 500-1000m away following an Assault. Required if the attacking Foot FE(s) have less than 2 Ammo.
